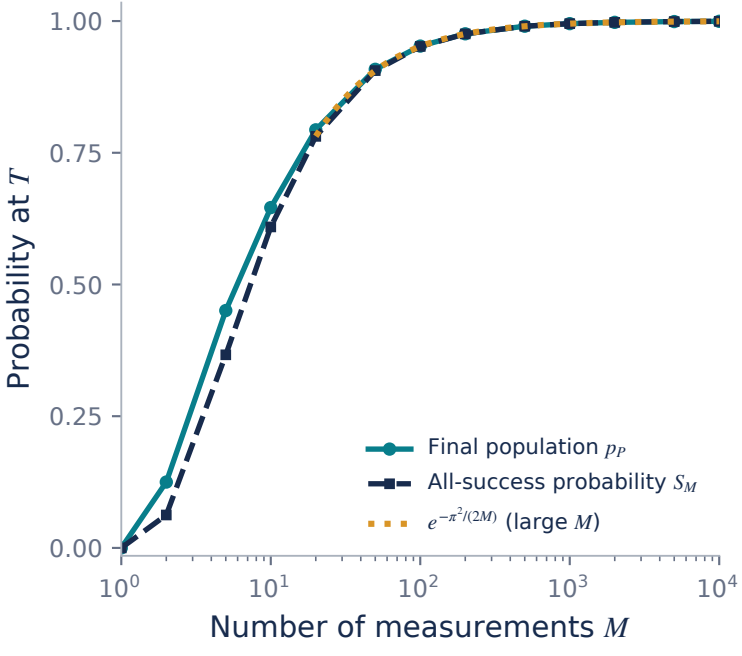
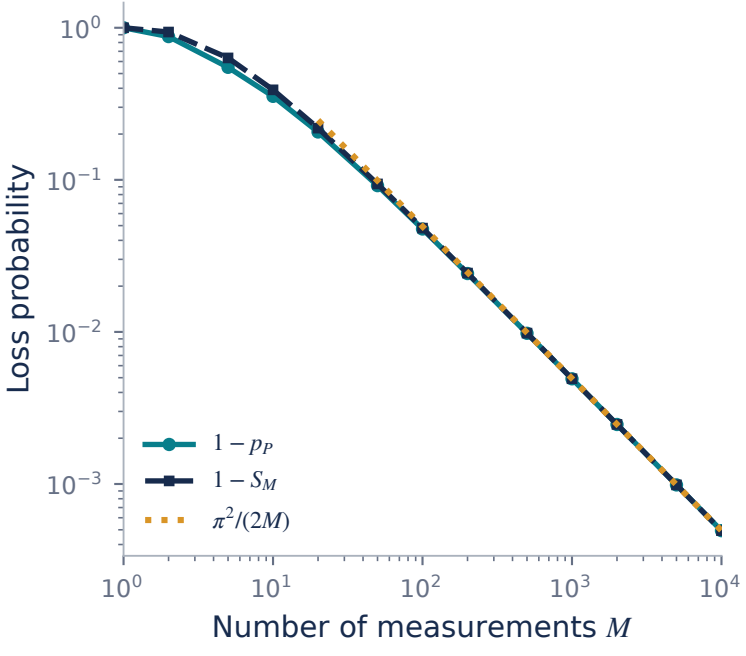
03 Frequent measurements suppress transitions

$V = 0 \cdot T = 0.5\,\mu\text{s} \cdot \Omega/2\pi = 1\,\text{MHz}$

a Population versus complete history



b High-survival regime



Non-selective population includes return histories; S_M excludes them. $M = 0$: $p_P \simeq 0$. $\Delta = \phi = 0$; initial $|00\rangle$.
